

DEAR STUDENT,

We greatly appreciate your interest in studying at RWTH Aachen University!

M.SC. TEXTILE ENGINEERING

The M.Sc. Textile Engineering at the RWTH Aachen University offers an interdisciplinary curriculum drawing on diverse science and engineering principles.

The programme provides knowledge on the latest development in textile technology in a wide range of subjects covering high-performance fibres, 3D-textiles and new processes and machines to manufacture textile products.

All compulsory courses are taught in English, while most of the elective courses and research projects starting in the 2nd semester are conducted in German. International applicants must therefore inherit basic German language skills (B1) upon the time of enrolment in October. The German Courses are not part of the official master's curriculum. However, from 2016, we will offer a preparatory Textile Master's College with German Language Courses as well as technical courses prior to the start of the semester.

LEARNING GERMAN – THE MASTER'S COLLEGE IN TEXTILE ENGINEERING

You do not have the required German language knowledge (B1)?

No problem: From 2016, students will have the chance to acquire the requested German knowledge until the B1 level prior to the beginning of the master programme at the RWTH Aachen University.

The RWTH International Academy will offer a Master's College for Textile students with a preparatory German Course and bridging technical courses. The courses will start in Mid-June and run until the beginning of the official semester in Mid-October.

Right after the admission in March, students without any prior knowledge will have the chance to prepare themselves with the help of an online course in order to reach a level of A2.1 before they come to Aachen in June.

The German courses in Aachen will start off with the level A2.1 in June and will take place every day, Monday to Friday, 4 hours per day. Students will finish the classes with the required B1 level in October.

Next to the German courses, students will have the chance to cover missing technical knowledge to fulfil the admission requirements within different bridging technical courses.

In addition, during their free time, the students will be included in a social programme with excursions and events to get to know the city and university.

More information upon [request](#).

Kick-start your career with a master's degree from Germany!
