Application as Student Worker in the Department of Large Volume Metrology

2 Spaces

Dear Mr. Example,

Thank you for our nice conversation this morning and the opportunity to apply in English for the open position as student worker in the research department for “Fertigungsmesstechnik und Qualitätsmanagement” in the field of Large Volume Metrology. I am particularly interested to work in this position, as it matches my background in mechatronics, which was my major focus during my bachelor studies. Additionally it allows me to gain some hands on experience in automatic control, which is the main focus of my master’s course, MSc Example, at the RWTH Aachen University.

Main Part: Brief description of your previous studies, research experience (Bachelor thesis, project work) and or practical work experience → everything should be related to the position! Remember, that this is supplementing your CV – you do not have to mention everything once again!

...

...

With my experience in mechatronics and automatic control, I feel well qualified to support your team with the aforementioned task. Next to the engineering challenges, I am also looking forward to gain some work experience in a German environment. I already have a good understanding of the German language and I am continuing to improve my proficiency with a course up to an intermediate level in the next semester.

I am available to start in that position from 15 September 2013. I am looking forward to hearing from you and can best be contacted via s.jenssen@academy.rwth-aachen.de

Thanks for your time and consideration.

Sincerely,

Silke Schulz
